INTRODUCTION

Continuing on from our seminar last year with theme on Safety and Health Towards Sustainability Agenda, we’re embarking on the issues related with high-rise, complex structures and confined spaces. Since, sustainability and safety are about the same goal which is, conserving resources. Conserving resources does not limited to project cost but to grasp it as an optimum life-cycle cost of an asset being constructed.

- Reimagined and innovate new ways to further advancing sustainability within the scope of occupational safety and health by;
1. Integrating and solidifying the relationship between OSH and sustainability agenda;
 2. Reinforcing the interdisciplinary training and education with the professionals, OSH community and business professionals;
 3. Measuring the impact of OSH performance on business or investment outcomes;
 4. Recognizing employers that successfully integrated OSH into sustainability agenda; and
 5. Improving the accessibility to data on OSH for sustainability reporting.

Enhancing and promoting engagement between the public and private entities also the OSH community as whole will paved the path in integrating the culture on safety thus achieving a workplace that is truly sustainable.

DAY ONE
23RD OCTOBER 2018
